E-Max Obtains OBM System Type-Approval

Transport Certification Australia today announced the type-approval of an E-Max Australia On-Board Mass (OBM) system.

E-Max has been servicing the auto electrical industry and heavy transport industry for two decades and prides itself on the high quality and standards of its solutions.

Details of the type-approved OBM system from E-Max Aust Pty Ltd are listed below:

Supplier	OBM System model	Category	 Type-Approved™
E-Max Aust Pty Ltd	Air-Weigh LoadMaxx	Category A	

There are three categories of [type-approved OBM systems](#) (categories A, B and C) which meet the needs of different stakeholders. Category A OBM systems electronically display mass information to drivers or loaders.

All categories of type-approval are subject to an assessment of the performance-based requirements contained in the [OBM System Functional and Technical Specification](#), of which the E-Max OBM System meet.

The Managing Director of E-Max, Phillip Carthew, said, “We feel a great sense of achievement in gaining TCA type-approval for the Air-Weigh LoadMaxx onboard weighing system.

“TCA’s type-approval of OBM Systems is a world first, showing global leadership in the transport industry, and we are very pleased to be a part of that.”

OBM systems are used for a diverse range of use, and type-approval brings reassurance of having met high levels of accuracy, reliability and robustness requirements. It also gives assurance of meeting tamper evidence and security levels relevant to the type-approval category.

“We’ve drawn upon the best resources from around the globe to satisfy TCA’s performance requirements, and to meet the needs of stakeholders,” said Mr Carthew.

“Being independently assessed provides a high-level of confidence for our products’ performance both from a software and hardware perspective.”

E-Max’s Air-Weigh LoadMaxx weighing technology allows seamless communication between prime movers and trailers.

Visit [E-Max](#) to find out more about its product range, including its Air-Weigh LoadMaxx onboard weighing system.
